AI at Ravn

Workflows, Tools & Best Practices

Alejandro Rodriguez · Rodrigo Pineda

Agenda

01 **BridgeOS** Design → Implementation, automated

Alejandro

02 **Forge** Persistent terminals for AI agents

Rodrigo

03 **Tips & Tools** MCPs, best practices, recommendations

04 **Q&A** Open discussion

Why We Built Our Own Tools

*We were thrown into the ocean of AI and learned how to swim.
Along the way, we built the tools we wished we had.*

- AI agents are powerful — but they lack structure and memory across workflows
- Manual processes don't scale: re-explaining context, running one command at a time
- We built solutions for the problems we hit every day

BridgeOS

The bridge between design and implementation

by Alejandro Rodriguez

The Problem

When you use an AI agent to build software today:

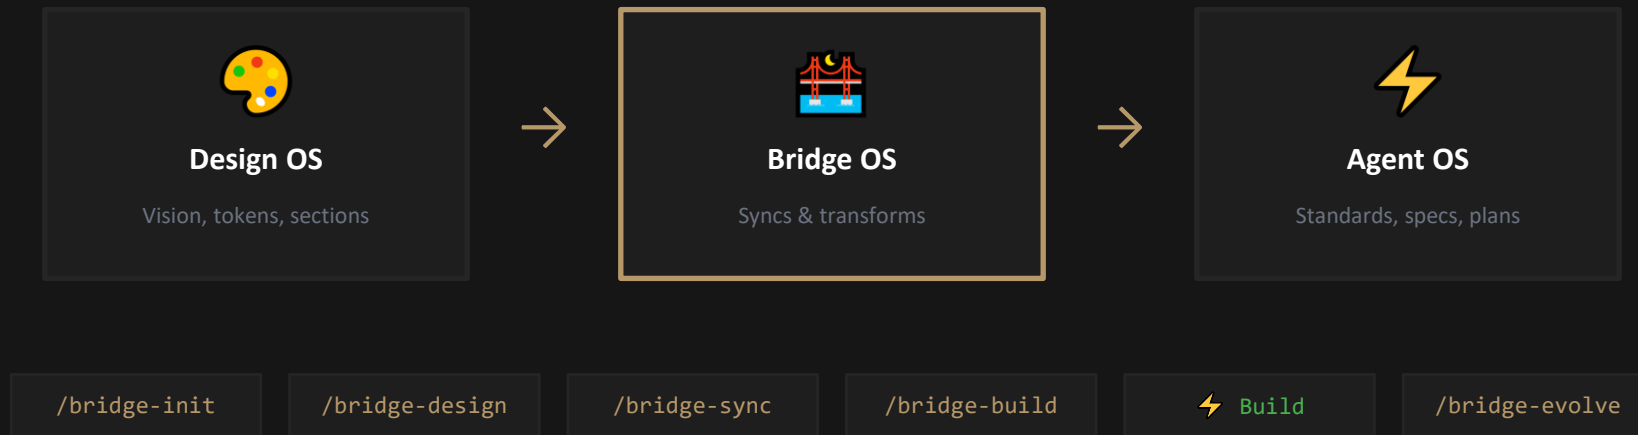

Without BridgeOS

- ✗ Agent invents colors & styles
- ✗ No source of truth for design
- ✗ Every prompt starts from scratch
- ✗ Scaling = re-explain everything

With BridgeOS

- ✓ Uses exact design tokens
- ✓ Design export = source of truth
- ✓ Cumulative context across specs
- ✓ Pixel-perfect fidelity

How It Works

Forge

Persistent terminals for AI coding agents

by Rodrigo Pineda

The Problem

AI coding agents run one command at a time. Full-stack work needs parallelism.

Before Forge

- ✗ One terminal, one command at a time
- ✗ Manually open & manage parallel sessions
- ✗ Can't monitor multiple agents at once
- ✗ No orchestration between agents

With Forge

- ✓ Persistent PTY sessions in parallel
- ✓ Spawn Claude & Codex sub-agents
- ✓ Real-time web dashboard to monitor all
- ✓ Agents can talk to each other via MCP

How It Works

Allow your AI Agent to manage your terminals

Session lifecycle, I/O, search, wait, events, agent delegation, and ops

Real PTY

Same engine as VS Code terminal — colors, TUI apps, signals all work

Web Dashboard

Live terminal output, session management, chat history browser

```
$ claude mcp add forge -- npx forge-terminal-mcp --dashboard
```

Tips & Recommended Tools

Our AI Toolkit

- Claude Code
- Gemini CLI
- Codex CLI
- Agent OS + Design OS

Worth Checking Out

- RTK — save tokens, boost context
github.com/rtk-ai/rtk
- Agency Agents
github.com/msitarzewski/agency-agents
- PromptFoo
github.com/promptfoo/promptfoo
- OpenViking
github.com/volcengine/OpenViking

Thank You
